

FIVE PRINT TOP, Heat Transfer Vinyl for Stretchable Garments.

Beachwear, leggings, leotards, and all stretch garments are difficult to customize due to their high elasticity. Stretching certain HTV materials often leads to cracking and distortion, ultimately destroying the visual appeal of the graphics.

At B-FLEX we've created the FIVE PRINT TOP digital printing film. It offers remarkable elasticity that can keep up with stretch garments without any damage. The special formulation and a mere 60-micron thickness make this heat transfer vinyl unique.

FIVE PRINT TOP isn't limited to just one advantage. To make the film suitable for many fabrics, it is equipped with a unique adhesive formula. This special formula performs on different surfaces and allows FIVE PRINT TOP to be used for a range of materials from cotton to nylon and treated fabrics, resulting in a 'universal' film.

To obtain a film suitable for all needs, the application is in just 4 seconds at 140°C and it allows working on garments particularly sensitive to thermal stress.

The FIVE PRINT TOP is a heat transfer vinyl for digital printing suitable for eco-solvent and latex inks. It comes with two finishes to choose from, a matte finish (FIVE PRINT TOP M) and a glossy finish (FIVE PRINT TOP G).

B-FLEX produces the highest quality heat transfer vinyl on the market. Ease of use, quick application, and long-lasting results are the main features of our products.
